### DETAILED ACTION

The rejection under the second paragraph of 35 U.S.C. 112 has been overcome by applicant's amendment although a new rejection of the amended claim is hereby set forth.

Applicant's arguments filed 12/16/4 have been fully considered but they are not persuasive to overcome the first paragraph rejection. The rejection is maintained for the reasons of record. Applicant argues that the description is adequate, citing *Alton*, but *Alton* states that: That knowledge can be established by affidavits of facts composed by experts, and by reference to publications available to the public prior to the filing date of the application. However no such affidavit or references have been offered- applicant refers to a declaration of Dr Comer but this is not of record in the case. Despite applicant's arguments, the specification still fails to show possession of the full scope of the claim.

### *Claim Rejections - 35 USC § 112*

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 8 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 requires a gene construct yet dependent claim 8 requires that only a promoter be used- this is confusing and renders claim 8 indefinite because there appears to be an inconsistency. Further, it is unclear what gene would be expressed using the method of claim 8 and thus the metes and bounds are unclear and the claims indefinite.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-8 remain rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Applicant claims using "a skin equivalent comprising a irritant responsive reporter gene construct" but the specification lacks description to convey that applicant has possession of the claimed invention. Applicant identifies 2 genes as being "irritant responsive" which is insufficient to describe an entire genus, i.e. "irritant responsive gene(s)"

particularly since applicant intends for the phrase "irritant responsive gene" to encompass unknowns.

The written description requirement for a claimed genus may be satisfied through sufficient description of a representative number of species by actual reduction to practice, reduction to drawings, or by disclosure of relevant, identifying characteristics, i.e., structure or other physical and/or chemical properties, by functional characteristics coupled with a known or disclosed correlation between function and structure, or by a combination of such identifying characteristics, sufficient to show the applicant was in possession of the claimed genus. See *Eli Lilly*, 119 F.3d at 1568, 43 USPQ2d at 1406

A "representative number of species" means that the species which are adequately described are representative of the entire genus. Thus, when there is substantial variation within the genus, one must describe a sufficient variety of species to reflect the variation within the genus. On the other hand, there may be situations where one species adequately supports a genus the genus could not be defined by function because function only disclosed what chemical structure did rather than what the chemical structure was. The Court went on to state "A description of a genus of cDNAs may be achieved by means of a recitation of a representative number of cDNAs, defined by nucleotide sequence, falling within the scope of the genus or of a recitation of structural features common to the members of the genus, which features constitute a substantial portion of the genus. *Lilly*, 119 F.3d at 1569.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
